

### **A good artificial grass deserves a good shock pad**

WASP “shock pads” are designed to be used in various artificial grass constructions, from leisure, multi-play area’s to high-quality sports fields that must meet international standards. For recreational use or for the professional athlete, the WASP has it all.

The WASP XPE shock pads have the right balance between the various sports technical properties required for an ideal playing or sports field

### **Made of XPE**

WASP XPE shock pads are made from cross-linked polyethylene (XPE), a closed-cell foam that does not absorb water and can be used in a variety of different geological areas. They are produced in Europe and meet the highest quality requirements.

### **Quick and easy installation**

THE WASP shock pads are supplied on a roll, which ensures quick and easy installation. The roll length is determined according to customer specifications. The WASP shock pads are equipped with expansion slots, which makes installation even easier.

### **Drainage.**

Naturally, drainage is very important for the playability of an artificial grass field. The expansion slots of the WASP shock pads also function as drainage slots, making the drainage of the shock pad much better than required by international standards.

### **The WASP shock pad benefits.**

WASP shock pads allow you to create an artificial turf pitch that meets the demands of all parties, from the contractor to the owner to the athlete. The shock pads meet all requirements for optimal performance and fun, and are durable and affordable.

WASP shock pad in short

- vertical drainage
- the right sport technical properties
